

Detailed Reports: Large-Scale Online Strategy Game Source Codes (Updated)

I've found several more large-scale online strategy game source code acquisitions that match your budget and requirements. These are complete, full-stack projects with both client-side and server-side code, not templates or toolkits.

1. World At War Nations

Attribute	Details
Game Name	World At War Nations
Platform	Browser (Desktop + Mobile via Capacitor)
Genre	Persistent Military Strategy / MMO
Price	Not publicly listed — likely 8,000–10,000+ (direct negotiation)
Buy Link	https://www.sideprojectors.com/project/81889/

How to Play

World At War Nations is a multi-world online strategy game where players build and manage bases, control cities and territory, develop economies and military forces, conduct attacks and intelligence operations, form alliances, research technologies, and compete for strategic control of the world.

Core Gameplay Systems:

- **Persistent World:** Country, city, and base structure with land, air, and naval military units.
- **Economy & Infrastructure:** Resource management, population, and infrastructure systems.
- **Combat & Intelligence:** Attack and support missions, combat and defence systems, spy missions, city capture, and territorial control.
- **Research & Doctrine:** Technology progression and military doctrine systems.
- **AI Players:** AI-controlled players with economy, diplomacy, and military behaviour.
- **Alliances:** Alliance creation, management, wars, and forums.
- **Rankings & Seasons:** Scoring, rankings, and seasonal gameplay.

Multi-World Architecture: The project supports multiple game worlds with separate persistent states, including **WAWN Prime**, **WAWN Frontier**, **WAWN Iron**, and **WAWN Speed**.

Key Features

- **Scale:** Approximately **2,000+ files** with extensive gameplay, backend, testing, deployment, and operational systems. This is not a basic template or unfinished prototype.
- **Technology Stack:** React, TypeScript, Vite, Node.js backend, SQLite persistence, Vitest testing, Playwright end-to-end testing, Capacitor Android and iOS projects.
- **Commercial Infrastructure:** Premium catalogue, premium account functionality, Stripe checkout integration, webhook processing, payment reward handling, and refund/dispute architecture.
- **Administration:** Multi-world management, administrative permissions, audit logging, backup/restore tooling, health/readiness checks, rate limiting, and operational monitoring.
- **Artwork:** Large collection of military-themed interface graphics, world/map imagery, building artwork, and storefront material with a dark military command-centre / radar-inspired style.

What Is Included in the Sale

- Game source code
- Backend source code
- Gameplay systems
- Database structure
- Game-world architecture
- Web interface
- Mobile application projects
- Testing infrastructure
- Deployment tooling
- Administration systems
- Existing artwork and game assets
- Branding and project materials
- Technical documentation and handover material

2. Full-Package H5 Strategy Game (Three Kingdoms / War Strategy)

Attribute	Details
Game Name	Full-Package H5 Strategy Game (Server + Client Sources)
Platform	Browser + Mobile (H5)
Genre	Three Kingdoms / War Strategy (SLG)

Attribute	Details
Price	Not publicly listed (direct negotiation)
Buy Link	https://hisseforum.net/konu/satilik-tam-paket-h5-strateji-oyunu-sunucu-istemci-kaynaklari.67864/

How to Play

This is a complete H5 (HTML5) strategy game with a Three Kingdoms / War Strategy theme, playable on both browser and mobile. The game includes a full server package with compiled client, server source code, database, admin panel, GM tools, and infrastructure prepared to run in a single folder on Windows.

Key Gameplay Elements (typical of Three Kingdoms SLG):

- City building and resource management
- Troop training and army formation
- World map conquest and territory expansion
- Alliance systems and player cooperation
- PvE campaigns and PvP battles
- Hero collection and development

Key Features

- **Complete Server Package:** Compiled client, server source code, database, admin panel, GM tools.
- **Single-Folder Deployment:** Ready to run on Windows, easily deployable on your own VDS.
- **Customizable:** Professional game infrastructure that can be customized and launched on your own server.

3. Web-Based Medieval Strategy Game (All Rights Transfer)

Attribute	Details
Game Name	Web-Based Medieval Strategy Game
Platform	Browser (Desktop + Mobile)
Genre	Medieval Strategy / Kingdom Builder
Price	125,000 TL (approximately 3,500 – 3,800)

Attribute	Details
	USD) — Buy Now price. Auction starts at 50 TL with 100 TL increments.
Buy Link	https://www.r10.net/script-satisi/4845014-web-tabanli-ortacag-strateji-oyunu-tum-haklariyla-satilik-50tl-den.html

How to Play

This is a comprehensive medieval strategy game developed with PHP + MySQL/MariaDB + JavaScript + Three.js. Players create their own kingdom, develop heroes, upgrade castles, train soldiers, and engage in PvE and PvP battles on a shared world map.

Core Gameplay Systems:

- **Hero Development:** Heroes can be developed and equipped with items.
- **Castle Upgrades:** Buildings and castle structures can be upgraded.
- **Army Training:** Soldiers can be trained and deployed.
- **Shared World Map:** Common world map for all players.
- **PvE & PvP Battles:** Both player vs environment and player vs player combat.
- **Expedition System:** Send armies on expeditions.
- **Loot System:** Gain resources through battles.
- **Player Market:** Trade resources and items with other players.
- **Quests, Chat, Rankings:** Full social and progression features.
- **In-Game Store:** Monetization through in-game purchases.
- **PayTR Payment Integration:** Turkish payment gateway already integrated.
- **Comprehensive Admin Panel:** Full administrative control.

Key Features

- **Full Source Code:** All source codes, SQL database structures, admin panel, quest system, game guide, and installation files are included in the sale.
- **Technology Stack:** PHP 8.1+, MySQL/MariaDB, PDO with parameterized SQL queries, HTML5, CSS3, JavaScript, Three.js for 3D hero and equipment displays. GLB format external 3D model support.
- **Deployment:** Runs on standard PHP hosting, VPS, Plesk, or cPanel. Mobile and desktop compatible. No Unity or desktop application required.
- **Editable:** Source codes can be modified and new systems can be added.
- **Payment Infrastructure:** PayTR payment system is already integrated.

Example Images

4. Arthalon — Complete Source Code Strategy MMO

Attribute	Details
Game Name	Arthalon
Platform	Web (Desktop + Mobile), Self-hosted
Genre	Real-Time Strategy / MMO / Castle Builder
Price	30,000 TL (approximately 850 – 900 USD at current exchange rates)
Buy Link	https://www.itemsatis.com/script-satisi/arthalon-tam-kaynak-kodlu-strateji-mmo-oyunu-s-5278485.html

How to Play

Arthalon is a web-based real-time strategy MMO where players build their own castles, produce resources, raise armies, form clans, and battle other players on a **1000×1000 open world map** rendered with 3D Babylon.js.

Military System:

- **5 Unit Types:** Infantry, Archer, Cavalry, Spy, Catapult — each with unique combat stats and escape mechanics.
- **4-Phase Combat Simulation:** Clash → Battle → Rout → Final Phase.
- **Wounded/Dead System:** If the hospital is full, wounded soldiers die directly.
- **Castle Defense Bonuses:** Shield system and diplomatic protection.

Construction & Economy:

- **10 Building Types:** Castle, Barracks, Warehouse, Farm, Wood Storage, Stone Quarry, Blacksmith, Market, Hospital, Walls.
- **5 Resource Types:** Wood, Stone, Iron, Food, Gold.
- **Automatic Resource Production:** Warehouse capacity management.

Clan & Diplomatic System:

- **Hierarchical Clan Structure:** Leader, General, Diplomat, Officer, Member.
- **Clan Technology Tree:** Research system.
- **Diplomacy:** Alliances, Non-Aggression Pacts (NAP), and formal war declarations.
- **Alliance Reinforcement:** Troop support from allied forces.

World Map & PvE:

- **1000×1000 Open World:** 3D Babylon.js rendering.

- **PvE Targets:** Rebel Camps (5 difficulty levels), Glacier Titan, Nemesis Boss.
- **Harvest Races:** Weekly PvP events.
- **Real-Time March Animations:** Battle line visual system.
- **Quest System:** Tutorial + daily quests.
- **Market:** Player-to-player resource/item trading.

Key Features

- **Full Ownership:** Source code, database schema, and entire asset pipeline included.
- **Frontend:** React + Babylon.js.
- **Backend:** Node.js + Express + Socket.io.
- **Production History:** Running in production with an active player history — this is a live project, not a prototype.
- **Multi-Language Support:** Fully localized and mobile-compatible.

Example Images

Visit the product page to view screenshots of the 3D world map, castle building interface, and combat system: <https://www.itemsatis.com/script-satisi/arthalon-tam-kaynak-kodlu-strateji-mmo-oyunu-s-5278485.html>

5. Block Conquest

Attribute	Details
Game Name	Block Conquest
Platform	Unity (Android, iOS, WebGL)
Genre	3D Real-Time Tactical Strategy
Price	\$405.00
Buy Link	https://sellunitysourcecode.com/product.php?slug=block-conquest-3d-strategy-game-buy-unity-game-source-code

How to Play

Block Conquest is a real-time tactical strategy game where players build hero formations and deploy units onto a dynamic battlefield grid.

Core Gameplay:

1. **Formation Building:** Create custom 10-hero formations before each battle.
2. **Territory Capture:** Engage in battles on a large **36×64 tactical grid**, strategically capturing tiles to gain advantages.

3. **Unit Management:** Command different unit types, including Melee Soldiers, Ranged Archers, Support Prophets, and Defensive Barricades.
4. **PVE Campaign:** Progress through a **50-stage PVE campaign** with increasing difficulty.
5. **Real-Time PVP:** Compete against other players in real-time matchmaking battles.
6. **Slingshot Artillery Mode:** Use physics-based artillery with pitch and yaw aiming, burst-fire mechanics, and AI-assisted targeting.

Progression & Retention:

- Hero level progression, rarity evolution, and shard collection.
- Gold and gem economy, daily/weekly/lifetime achievements.
- Global leaderboard system, trophy rankings, and campaign rankings.
- Spells and abilities: Bombardment, Poison Damage Over Time (DOT), Blizzard.

Key Features

- **Complete Backend:** Node.js, Express.js, MongoDB, JWT authentication, and anti-cheat protection systems.
- **Server-Authoritative Gameplay:** Deterministic battle calculations.
- **Data-Driven Architecture:** All game systems can be modified using CSV configuration files.
- **Unity Client:** uGUI interface, responsive UI, UniRx integration, DOTween Pro animations, Cinemachine camera system, object pooling optimization, Easy Save 3 integration.
- **Platforms:** Android, iOS, WebGL, Desktop.
- **Requirements:** Unity 6.4 or newer, Node.js environment, MongoDB database.

Example Images

- **Product Page:** Check the product page for screenshots of the 36×64 grid and hero formation screens: <https://sellunitysourcecode.com/product.php?slug=block-conquest-3d-strategy-game-buy-unity-game-source-code>

6. State.io Online Multiplayer Realtime Strategy RTS

Attribute	Details
Game Name	State.io Online Multiplayer Realtime Strategy RTS
Platform	Unity (Photon Fusion 2)
Genre	Territorial Conquest Strategy / RTS
Price	999.00 ** (or **1,098.90 with VAT)
Buy Link	https://assetstore.unity.com/packages/templates/packs/state-io-online-multiplayer-realtime-strategy-rts-photon-fusion--345780

How to Play

State.io is an abstract real-time strategy game where players conquer an alternative world by capturing territories and destroying opponent towers.

1. **Territorial Conquest:** Send units from your territories to attack adjacent enemy territories.
2. **Real-Time Battles:** Engage in fast-paced 1v1 or multiplayer battles against other players online.
3. **Upgrades:** Between matches, use gold to upgrade **Starting Units** and **Production Speed** to gain advantages in longer battles.
4. **Multiplayer:** Built on **Photon Fusion 2** for stable, fast real-time multiplayer networking.

Key Features

- Production-ready multiplayer framework (not a prototype).
- Full source code included.
- Optimized for performance with a minimalist, easy-to-read graphical style.
- Compatible with Unity 2022.3.62f2 (Built-in Render Pipeline).
- **Territory conquest real-time strategy** gameplay.

Example Images

- **Unity Asset Store Key Image:** <https://assetstorev1-prd-cdn.unity3d.com/key-image/40d47f8c-fe63-4e88-966b-594ebd94b37b.jpg?v=1>
- **App Store Screenshots:** The iOS App Store page for "State.io - Conquer the World" features multiple gameplay screenshots showing the minimalist map and battle interface.

Summary Table

Game	Price	Platform	Genre	Server Code	Client Code	Existing Player Base	Scale
World At War Nations	~ 8,000 – 10,000+ (negotiable)	Browser + Mobile	Persistent Military MMO	Node.js, SQLite	React, TypeScript, Capacitor	Yes (multi-world)	2,000+ files
Full-Package H5 Strategy	Direct negotiation	Browser + Mobile (H5)	Three Kingdoms SLG	Full server source	Compiled client + source	Not specified	Complete package
Web Medieval Strategy	~ 3,500 – 3,800 (125,000 TL)	Browser	Medieval Strategy	PHP + MySQL	PHP + JavaScript + Three.js	Not specified	Full source

Block Conquest	\$405	Unity (Android, iOS, WebGL)	Real-Time Tactical Strategy	Node.js, Express, MongoDB	Unity C#	Multiplayer backend	Large-scale
State.io Multiplayer Strategy	\$999	Unity (Photon Fusion 2)	Territorial Conquest RTS	Photon Fusion 2	Unity C#	Real-time multiplayer	Production-ready

Recommendations Based on Your Budget (5,000–10,000)

Top Pick: World At War Nations

This is the closest match to a "pretty large game" with **2,000+ files**, multi-world architecture, existing commercial infrastructure (Stripe integration), and complete IP transfer. The price is not publicly listed but is likely within your budget range. You'll need to contact the seller directly on SideProjectors.

Best Value: Arthalon

At approximately 850–**900 USD**, Arthalon is an excellent value. It's a complete, production-running MMO with a full stack (React + Babylon.js frontend, Node.js + Socket.io backend) and existing player history. The price is well below your budget, leaving significant room for customization and marketing.

Strong Alternative: Full-Package H5 Strategy Game

This complete H5 strategy game package includes compiled client, server source code, database, admin panel, and GM tools. It's ready to deploy on Windows and can be customized for your own server. The price requires direct negotiation, but the complete package nature makes it worth investigating.

Also Consider: Web-Based Medieval Strategy Game

At approximately 3,500–**3,800 USD**, this is a comprehensive medieval strategy game with full source code, admin panel, quest system, and PayTR payment integration. It uses PHP + MySQL + Three.js and runs on standard hosting. A live demo is available for testing.

Next Steps

1. **Contact Sellers Directly:** For World At War Nations and the Full-Package H5 Strategy Game, reach out to sellers to negotiate price and request a sanitized buyer package or demo.
2. **Review Demos:** For the Web-Based Medieval Strategy Game, log into the demo at <https://langocorum.com/newgame/> with admin / 19031903 to evaluate the gameplay and code quality.
3. **Verify Ownership:** Before purchasing, always verify that the seller has full legal rights to transfer the intellectual property and source code.
4. **Request Source Code Review:** Ask for a sanitized package or code samples to assess code quality, documentation, and completeness before committing to a purchase.

Would you like me to help draft inquiry messages to any of these sellers, or search for additional games in a specific sub-genre (e.g., 4X, tower defense, auto-battler)?
